

GETTING THE WHOLE ECO-SYSTEM ON THE GRID - ENABLING BLOCKCHAIN IN ENERGY

ETEX

10th October 2018

Jon Ferris, Strategy Director

@fractalgrid

A Changing System

- Early 20th C – problems of simplicity
 - Individuals
- Late 20th C – disorganised complexity
 - Average behaviour
- 21st C – organised complexity
 - Multilateral interactions

Architecture of markets, incentives, institutions, governance and regulations date from deregulation of late 20th C

Challenge: old structures do not support new markets

Fragmented Data

- Low asset visibility & inclusion
- Siloed data
- Excluded capacity

Fragmented Markets

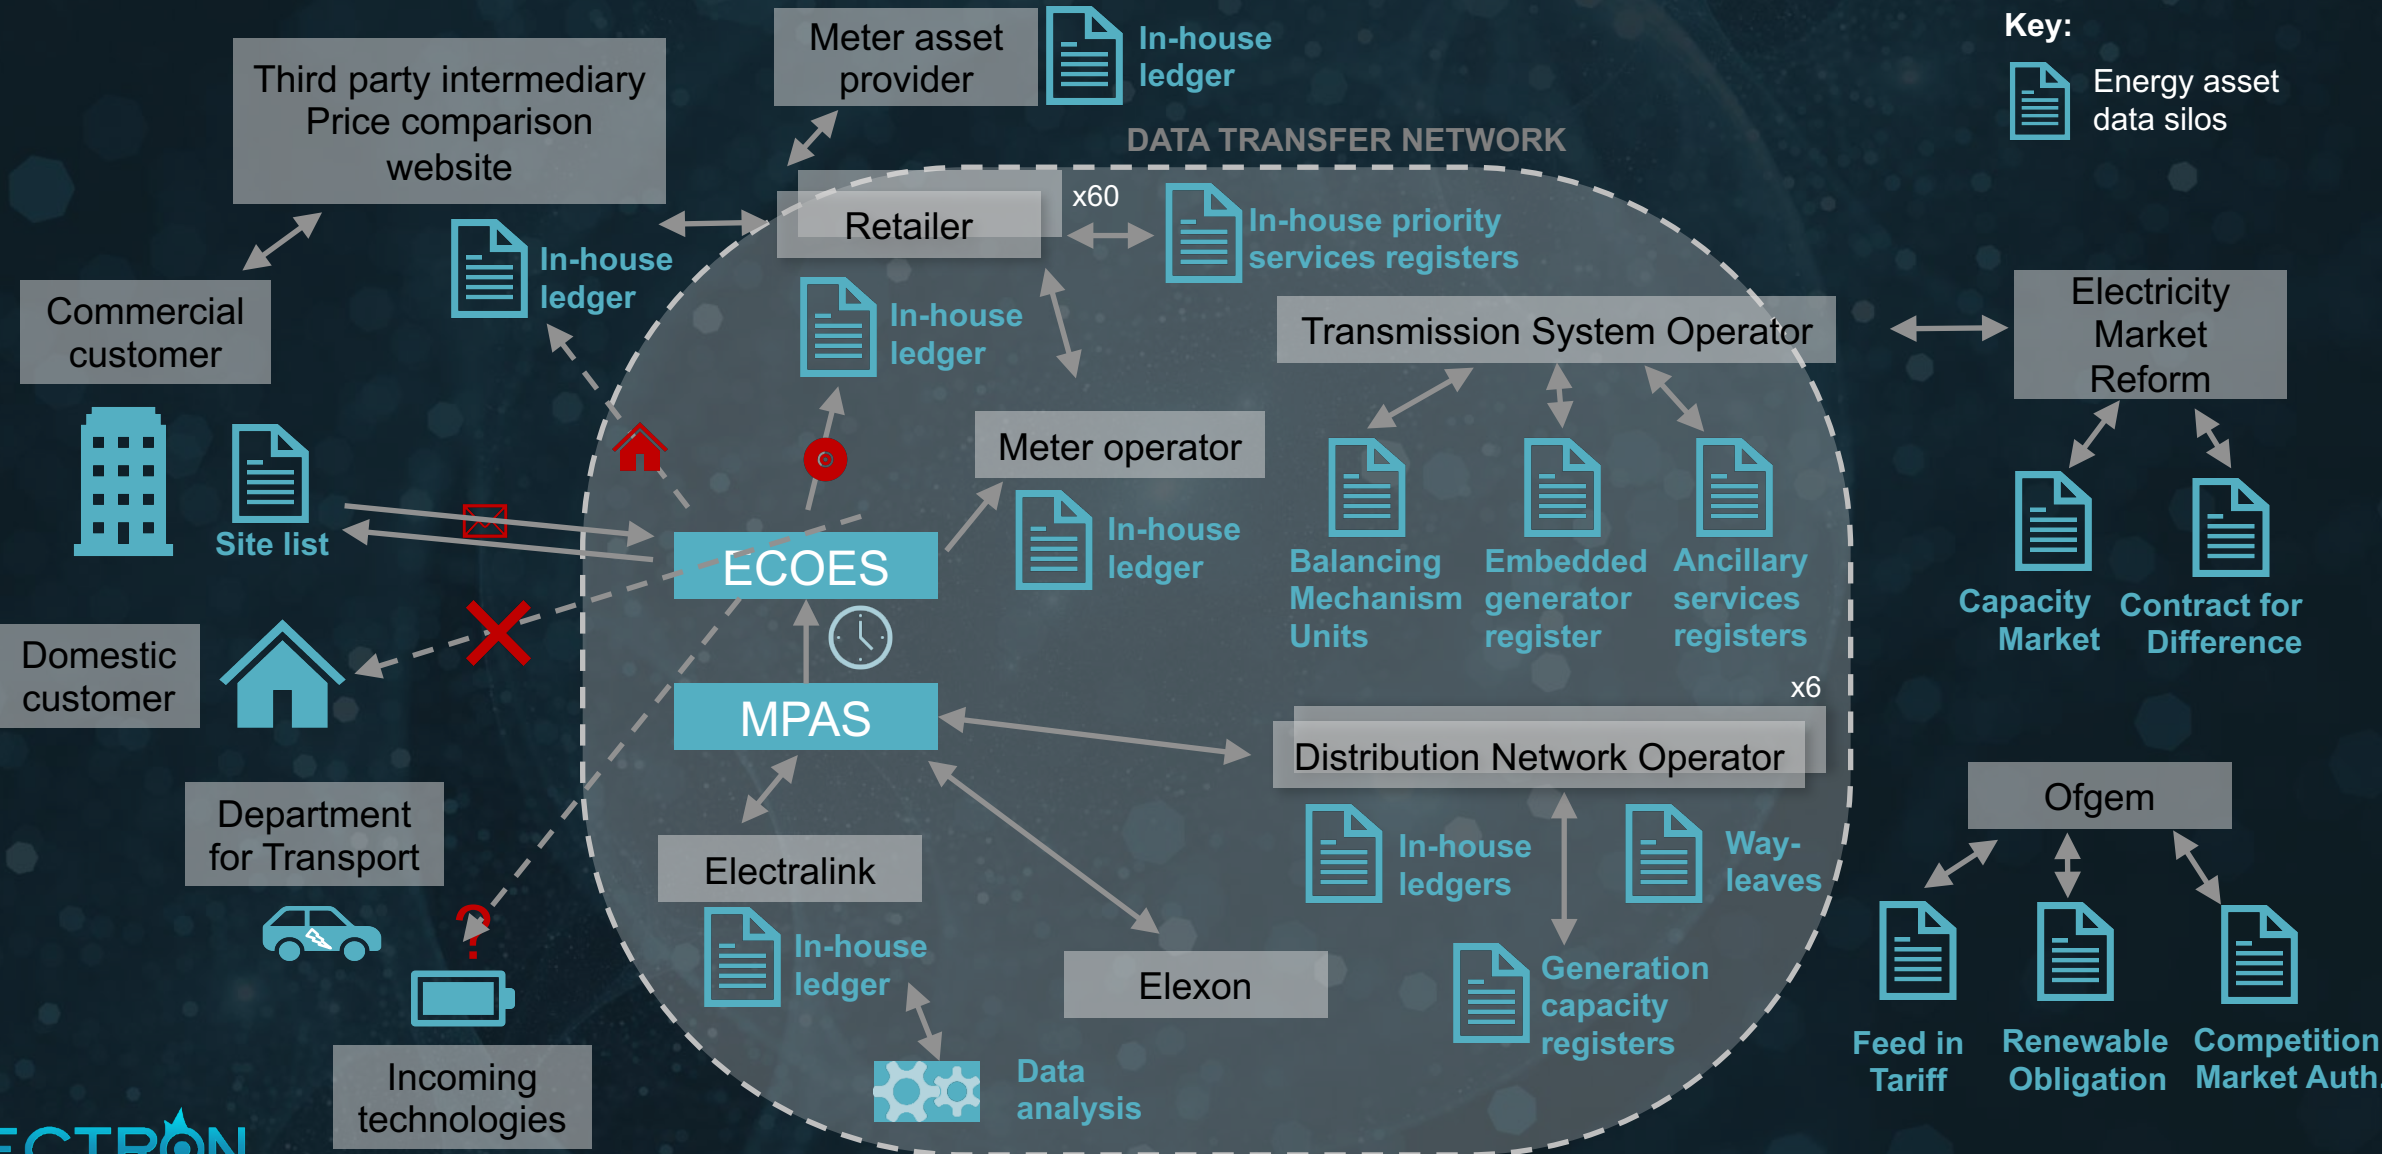

- Uncoordinated price signals
- Fragmented liquidity
- Missing markets

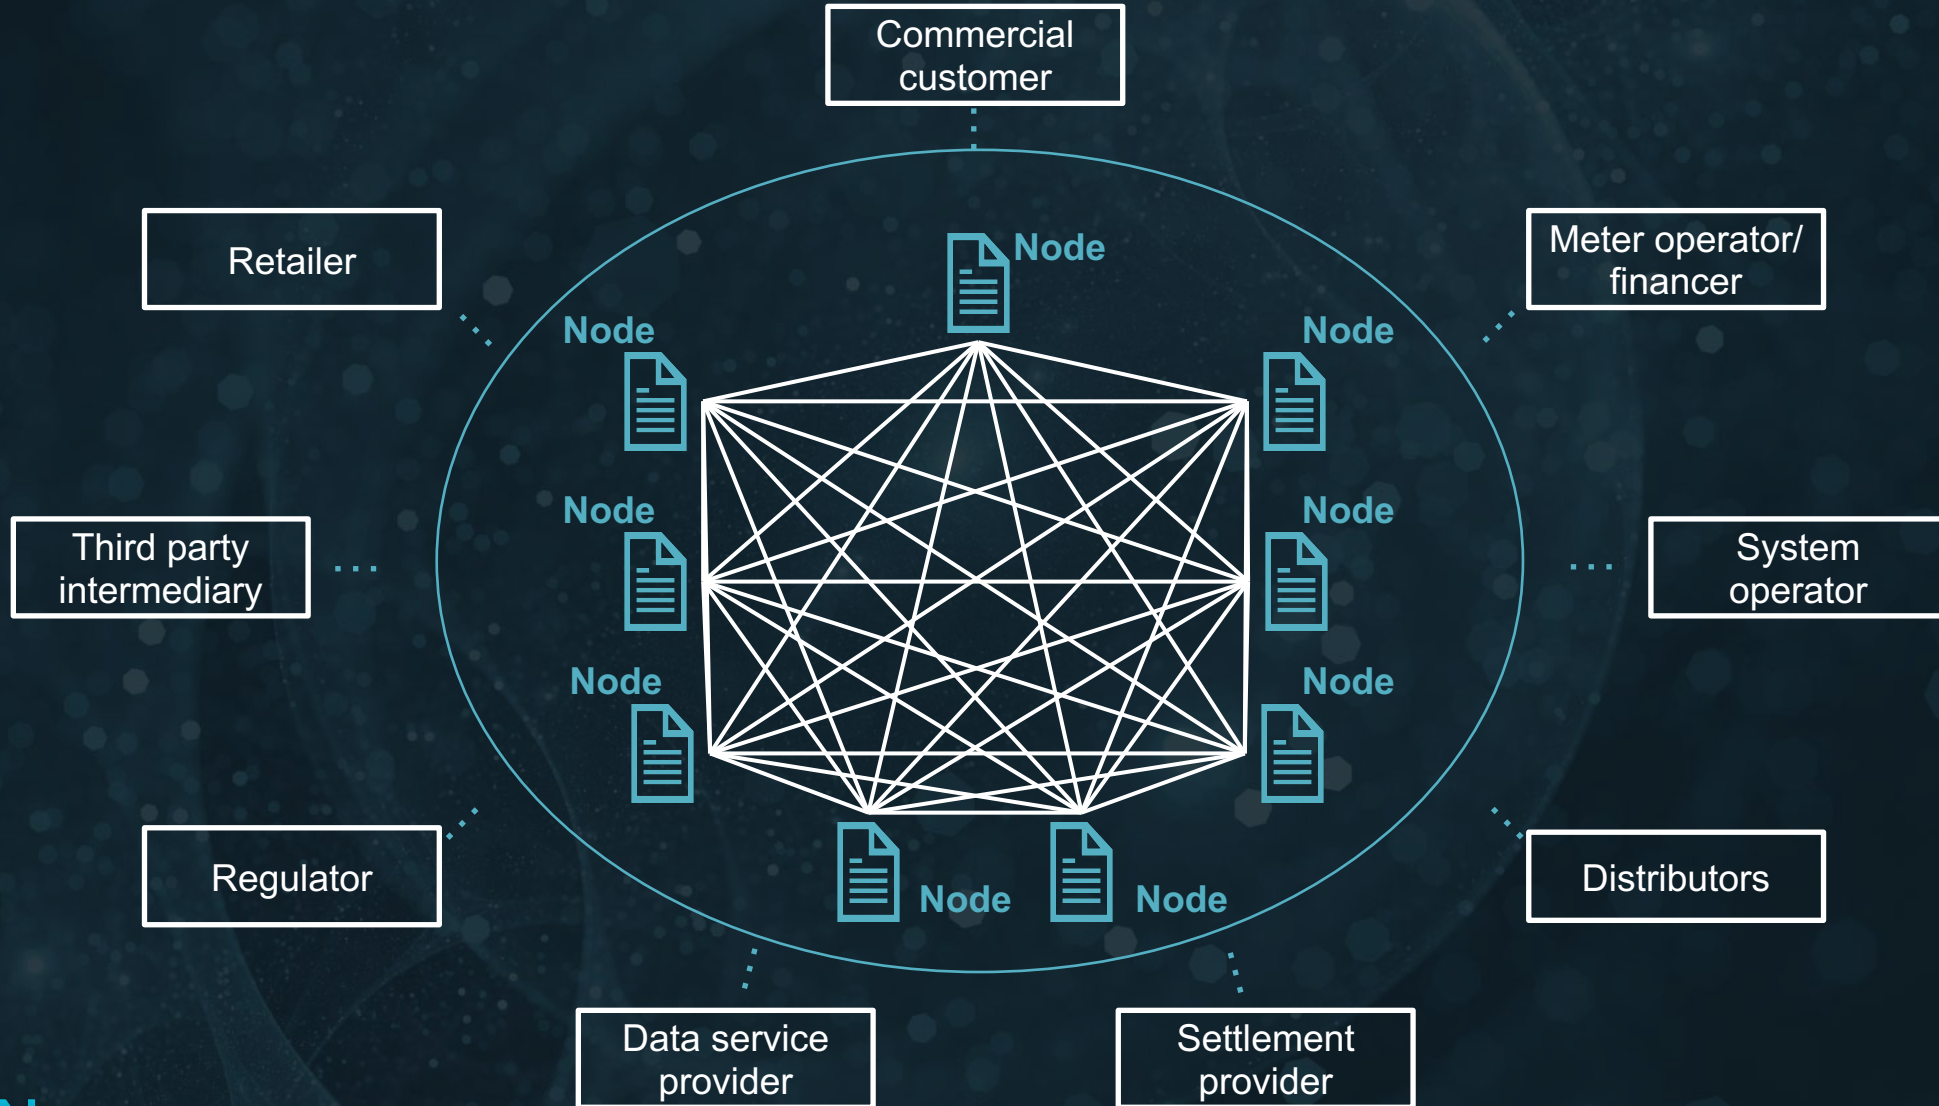

Inefficient System

1. **Higher costs**
2. **Higher carbon**
3. **Lower resilience**

Fragmented Data

A common asset register...

Fragmented value in energy markets

Traditional generation

- Energy
- Ancillary Services

Traditional + btm generation + renewables

- Energy
- Ancillary Services

+

- Low carbon
- Capacity

Traditional generation, renewables & smart systems

- Energy
- Ancillary Services
- Location

+

- Low carbon
- Capacity

+

- Power Quality
- Constraint mgmt.
- Response profile

The path to smart markets

One-sided market

Bilateral Trading

Simple Attributes

Rivalrous trading

Two-sided market

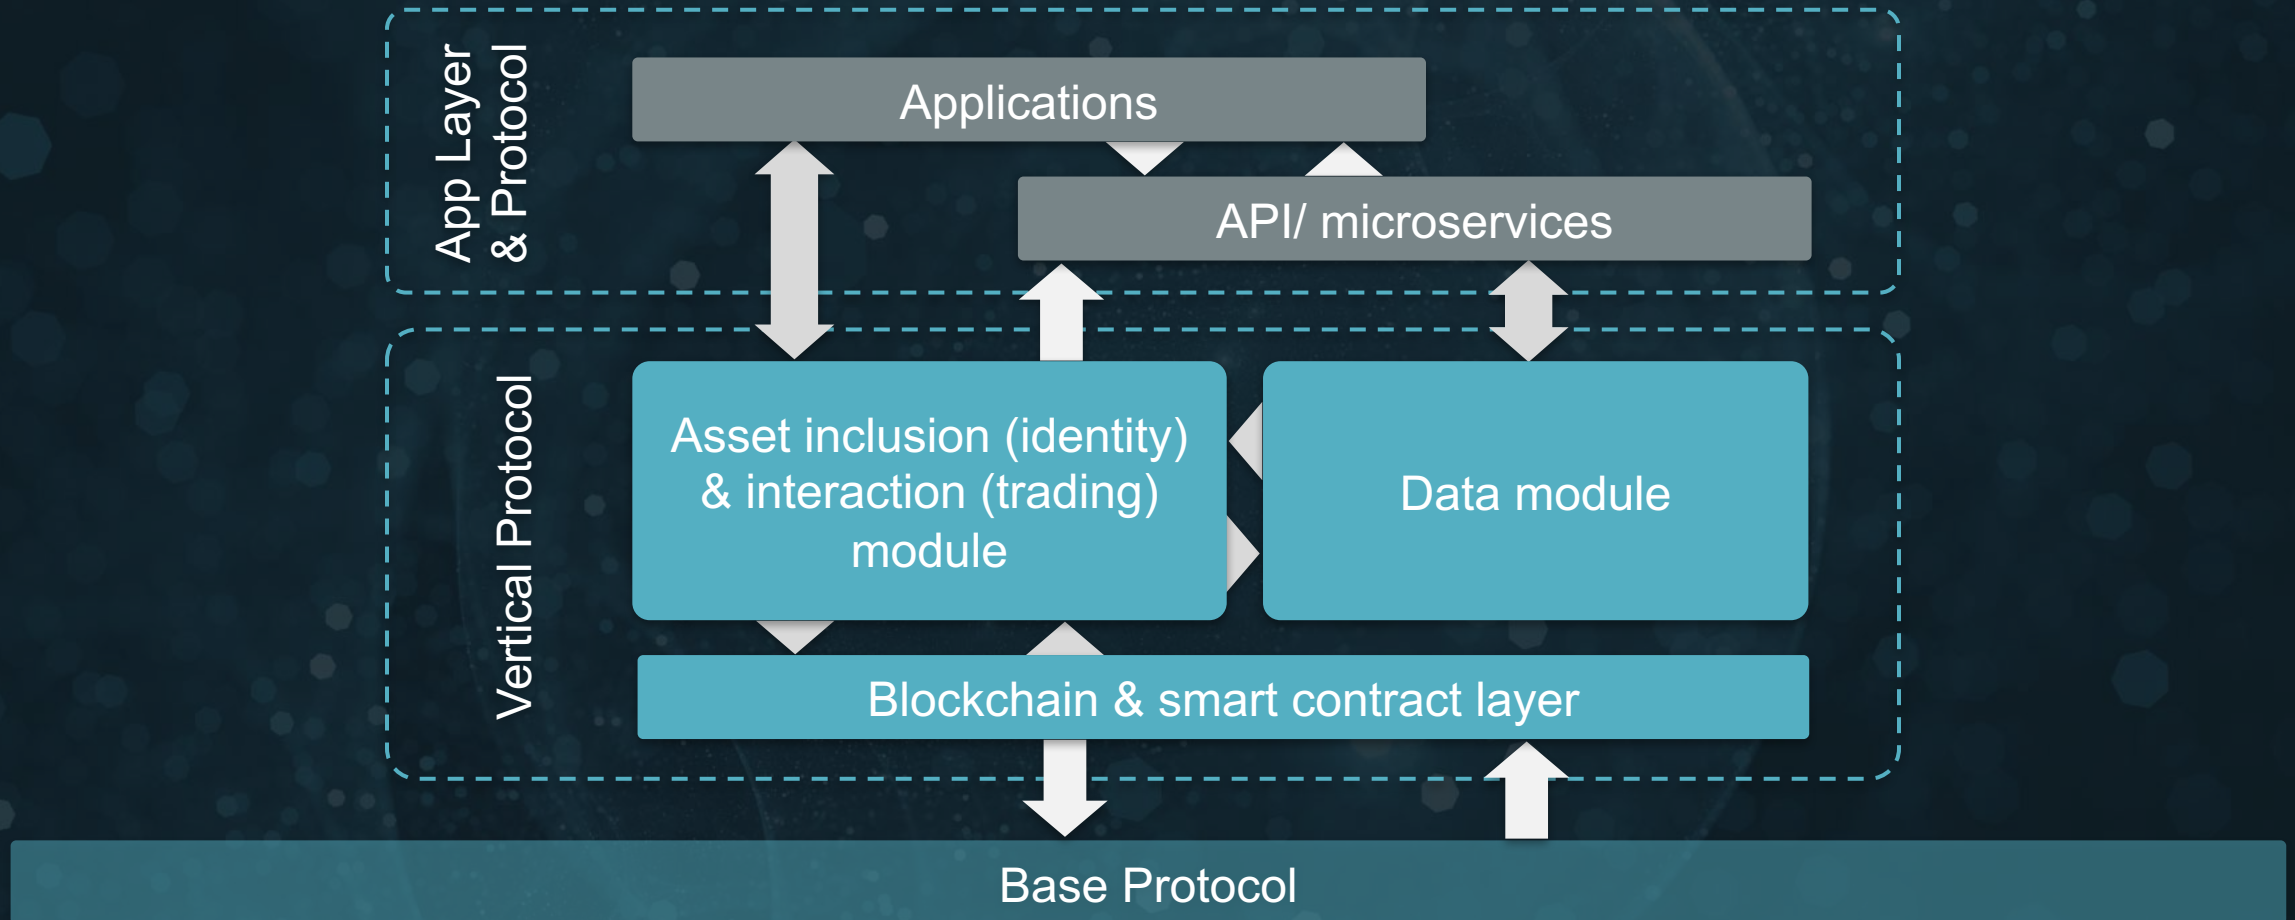

Multi-lateral Trading

Complex Attributes

Collaborative trading

New business models: value migrates to apps & services

Building blocks: Apps in development

**Secondary Capacity Trading
Completed**

**Asset Registration Platform
Next Phase: October 2018**

**Balance Group P2P
Start: August 2018**

**Energy Communities
Start: August 2018**

**Location specific DER trade
In scoping phase**

**Constraint Queue Management
In scoping phase**

Blockchain: cooperation as a competitive advantage?

Enables coordination without surrendering control of data, customers, or functionality

Coordination

- Single source of truth
- Whole market liquidity
- Collaborative transactions
- Cost Reflective Value

Assurances

- Visibility/Transparency
- Auditability
- Data ownership
- Level playing field
- Programmable Rules
 - Data access
 - Trading

Extensibility

- No functionality gatekeeper
- Integrates with new models
 - e.g. P2P/ Microgrid
- Streamline settlement
